

**Can you spot the killer?**

No. Of course you can't. After all, the sun's ultraviolet radiation is invisible. Yet every day — even cloudy ones — this unseen killer attacks you. And the more ultraviolet radiation your skin receives in your first 18 years, the more likely it is you'll develop skin cancer as an adult. For more information, log on to: [www.ucan.cc](http://www.ucan.cc).

**Don't take the sun lightly. Cover up or use sunscreen every day.**
